This report provides the detailed results for each question from this school/district's *2015–16 California Healthy Kids Survey* (CHKS), presented in tables organized by topic.

The CHKS, along with its two companion surveys–*California School Climate Survey* (CSCS) for staff and the *California School Parent Survey* (CSPS)–is a service of the California Department of Education (CDE). These three surveys form the *California School Climate, Health, and Learning Survey (Cal-SCHLS) System*, the largest, most comprehensive effort in the nation to assess students, staff, and parents at the local level on a regular basis to provide key data on school climate, learning supports and barriers, stakeholder engagement, and overall youth development, health, and well-being. The surveys provide a wealth of information to guide school improvement efforts and your Local Control and Accountability Plans (LCAP), particularly in regard to the state priorities of enhancing school climate, pupil engagement, and parent involvement.

Factsheets, guidebooks, and other resources to help in understanding and using survey results are available for downloading from the survey website: chks.wested.org. The California Safe and Supportive Schools website (californias3.wested.org/) provides a wealth of information and tools helpful in implementing effective strategies to improve school climate, student supports, and social-emotional learning. Particularly valuable in regard to LCAP efforts are ***Making Sense of School Climate*** (californias3.wested.org/tools/schoolclimate) and ***Helpful Resources for Local Control and Accountability Plans, 2014-15*** (chks.wested.org/resources/LCAP_Cal_SCHLS.pdf).

The Cal-SCHLS Technical Assistance Center offers workshops to help in identifying local needs and developing action plans to meet those needs, including data use workshops.

SURVEY PURPOSE

The California Department of Education (CDE) has funded the CHKS since 1997 to provide data that would assist schools in: (1) fostering positive school climates and engagement in learning; (2) preventing youth health-risk behaviors and other barriers to academic achievement; and (3) promoting positive youth development, resilience, and well-being. A thorough understanding of the scope and nature of youth behaviors, attitudes, and learning conditions is essential to guide school improvement efforts and to also develop effective prevention, health, and youth development programs. These surveys grew out of CDE's commitment to helping schools promote the successful cognitive, social, and emotional development of all students and create more positive, engaging school environments for students, staff, and parents.

SURVEY CONTENT OVERVIEW

The CHKS consists of a required general set of questions and a series of optional, supplementary topic-focused modules that districts can elect to administer. Districts may also add their own questions of local

interest. Table 1 indicates the modules administered by the district/school.

The survey consists of a broad range of key questions identified by an expert advisory committee that is considered most important for schools to administer to guide improvement of academic, health, and prevention programs and the promotion of student achievement, positive development, and well-being. The primary focus of the survey is assessing student perceptions and experiences related to school climate and engagement, learning supports, and health-related, non-academic learning barriers (e.g., substance use, bullying and violence, and poor physical and mental health).

School-Related Core Content

To support school improvement efforts, the majority of questions on the CHKS assess school performance, engagement, climate, and experiences. The survey provides self-reported data on:

- School connectedness;
- The level of which students experience caring adult relationships, high expectations, and opportunities for meaningful participation at school, three fundamental developmental supports (protective factors) that promote positive academic outcomes; and
- Perceived safety and frequency of, and reasons for, harassment and bullying at school.

SURVEY ADMINISTRATION AND SAMPLING

School staff administered the survey, following detailed instructions provided by CDE that were designed to assure the protection of all student and parental rights to privacy and to maintain confidentiality. Students were surveyed only with the consent of parents or guardians. Each student's participation was voluntary, anonymous, and confidential. Table A1.1 gives the target sample of students and the final number and percent of students who completed the survey (the participation response rate).

THE REPORT

The tables in the Main CHKS Report provide the percentages responding to each question response option by grade level, organized by topic. Because it is just as important to identify the positive behaviors of youth as it is to identify the risks they face, the tables include the percentages of youth who do not engage in each risk behavior. Percentages are rounded off to the nearest whole number.

UNDERSTANDING AND USING THE DATA

Among the tools available to help in understanding and using the survey results, especially for LCAP implementation and monitoring, *Making Sense of School Climate* provides a discussion of all the CalSCHLS secondary survey items that relate to school climate (download californias3.wested.org/resources/S3_schoolclimateguidebook_final.pdf). As the elementary survey assesses many of the same variables, this is also a useful guide for lower grade levels. Elementary results should also be compared with those from students in middle and high schools, to determine how student strengths and needs develop with age. In particular, results from middle school can help guide engagement, prevention, and health promotion efforts in elementary schools.

Care must be taken to understand the factors that can impact the quality, validity, and generalizability of the results, such as changes that occur in survey content, administration, and/or sample characteristics

between administrations. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the *CHKS Data Use and Dissemination Guidebook*.

Sample Characteristics

Among the most important factors affecting the quality of survey results is the level of student participation. The validity and representativeness of the results will be adversely affected if the student response rate is lower than 60%. One indication of the survey's representativeness is how accurately the sample reflects the gender and ethnic composition of the student enrollment. Even if the response rate is low, the results provide an indication of what those students who did respond felt about the school and their experiences and behavior.

Changes Between Survey Administrations

Many factors may account for changes in results from administration to administration besides real changes in behavior, attitudes, or experiences among students. The change could be due to differences over time in the characteristics or size of the sample of students who completed the survey, or changes in the questions themselves, or differences in the time period in which the survey was administered (e.g., some risk behaviors tend to increase with age, and be higher after holidays or even a social event).

NEXT STEPS

Receiving this report is just a beginning step in a data-driven, decision-making process. The results of this student survey should be compared to those obtained from the Cal-SCHLS surveys of school staff and parents. It is important to determine how consistent are student, staff, and parent perceptions and experiences. The elementary results should be compared to the middle and high school results.

CHKS results will also be enriched if analyzed in the context of other data typically collected by schools that relate to the variables assessed, such as discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

The following actions, which can be requested as custom services (additional fees apply), will help in fostering effective use of the results and provide additional information to support school and program improvement efforts and the LCAP process.

Request School Reports

If the schools in the district vary significantly in demographics, programs, or other characteristics, consider requesting individual reports for each school (a fee applies).

Request Disaggregated Report or Analyses

The staff of the Regional TA Centers can produce full reports that look at how results vary by demographic subgroups (e.g., race/ethnicity or by youth who are low in academic motivation compared those who are high). This is particularly important given the LCAP requirement that districts identify and address the needs of underserved subgroups.

Engage with Students, Staff, and Parents in an Action Planning Process

Engage students, staff, and parents in reviewing and exploring the meaning of the results and obtain their input into how the school might better meet the needs identified and the development of a detailed

action plan. This communicates to students that you value their input into how to improve the school and gives them an opportunity for meaningful participation. This helps enhance school connectedness among students and parent involvement, two of the LCAP priorities. It will also promote higher rates of participation the next time the survey is administered, as stakeholders will see how the data has been used for positive purposes.

On request, Cal-SCHLS staff can conduct a structured group Listening to Students Workshop designed to explore with students, as staff observe, the meaning of survey results and obtain their input on how to address the needs identified by the survey. Cal-SCHLS staff also can conduct a Data Use Action Planning Workshop designed to identify local needs based on the survey results and engage stakeholders in developing a detailed plan and timetable for meeting those needs using evidence-based strategies.
