PREFACE

This report provides the detailed results provided to teachers, administrators, and other school staff on each question in your 2011-12 administration of the *California School Climate Survey* (CSCS), presented in tables organized by topic.

The CSCS, along with the *California Healthy Kids Survey* (CHKS) and the *California School Parent Survey* (CSPS), is a service of the California Department of Education (CDE). These three surveys form the California School Climate, Healthy, and Learning Survey (Cal-SCHLS) System, the largest, most comprehensive effort in the nation to assess students, staff, and parents at the *local* level on a regular basis to provide key data on learning barriers, engagement, and supports. For additional information and resources, visit the survey website: cscs.wested.org.

SURVEY PURPOSE

The CSCS was developed for CDE by WestEd in 2004, to fulfill the requirement in the *No Child Left Behind Act* of 2001, Title IV, that schools conduct an anonymous teacher survey related to student drug use and violence. Recognizing the opportunity this requirement presented, CDE expanded the content to collect other data to guide school improvement efforts in general, and also made it possible for schools to add questions of their own choosing so that the survey could better meet local data needs. Because the results are anonymous and confidential, the survey provides staff with an opportunity to honestly communicate their perceptions about the school without repercussions.

The CSCS, as well as the CHKS, grew out of CDE's commitment to (1) helping schools promote the successful cognitive, social, and emotional development of all students; and (2) fostering positive school working environments, particularly to help address the growing problem of low teacher retention. This CSCS report provides perspective on the degree to which staff perceive that their school has a learning and working environment that is safe, supportive, caring, collegial, challenging, and engaging, with norms and standards that encourage academic success. Taken as a whole, the survey questions map to three pillars emphasized by many school reform efforts—rigor, relevance, and relationships. In conjunction with CHKS student data, CSCS data enriches a school's ability to create a positive school climate that promotes quality teaching, school connectedness and academic achievement among students, and well-being among both students and staff.

Closing the Achievement Gap

In 2008–09, questions were added to provide better data to advance the efforts of schools to close the state's persistent racial/ethnic achievement gap. These questions, reported in Section IV, assess respect shown to students, equity and diversity, and cultural sensitivity.

Comparison with CHKS Results

Another broad CSCS goal was to provide data from school staff that are comparable to student self-report information from the CHKS, to ascertain whether staff perceptions accurately reflect student behaviors and experiences. The *Guidebook for the California School Climate Survey Part II: Survey Content, 2011-12 Edition* provides a crosswalk between CSCS and CHKS questions and discusses how the two surveys might be compared. To enhance both survey administration efficiency and data comparability, schools are encouraged to administer the surveys at the same time.

SURVEY ADMINISTRATION AND SAMPLE

Schools were provided by CDE with detailed survey planning and administration instructions (see the *Guidebook for the California School Climate Survey Part I: Administration, 2011-12 Edition*, available at www.cscs.wested.org/training_support). These guidelines call for the CSCS to be administered (usually online) in schools at the same time as the CHKS, among all staff in grades 5 and above.[1] Staff participation is totally voluntary, anonymous, and confidential. The tables in Section 1 (Sample Characteristics) provide the numbers of respondents who completed the survey; their roles at the school (e.g., teacher, administrator, counselor); the length of their employment at the school and in their positions; and their races/ethnicities.

SURVEY CONTENT OVERVIEW

The questions were selected with the assistance of an advisory committee to assess the key school climate variables that research and theory indicated are most associated with successful learning and teaching. Like most school climate surveys, it focuses on individual behaviors; patterns of communication and interactions; and professional and student supports. For a detailed discussion of the significance of each question, see the *Guidebook for the California School Climate Survey Part II: Survey Content, 2011-12 Edition*.

Questions are divided into three modules. The first Core section is answered by all staff. Two additional modules target staff with responsibilities for learning supports and for special education. These group-specific modules ask for program- and issue-specific information that might not be known to staff outside these groups, and are answered only by subsamples of all respondents. Tables 8.1 and 9.1 provide the numbers of staff who completed each of these modules.

Core Survey (Section 1)

All staff answer the questions in the first part of the survey, which provides background information about the characteristics of the staff respondents who completed the survey (Tables 1.1–1.6) and assesses the following main domains:

- How **supportive and inviting** the learning and working environment is in general (Tables 2.1 and 2.6);
- School **norms and standards** that promote achievement, including the rigor and relevance of instruction, and a shared sense of responsibility for school improvement (Tables 2.2–2.5 and 2.7);
- **Staff supports, professional respect, and collegiality** within the working environment, factors that surveys of California teachers have shown to be key to teacher retention (Tables 2.5–2.10 and 2.19–2.20);
- Staff and student **safety** (Tables 2.17–2.18);
- **Student developmental supports** in the school environment—caring staff/student relationships, high expectations, and opportunities for meaningful participation and decision-making—that resilience research has linked to school and life success (Tables 3.1–3.10);
- **Equity**, respect, and cultural sensitivity, which are particularly germane for closing the achievement gap (Tables 4.1–4.13);
- Student **behaviors that facilitate learning**, including the degree to which students are ready and motivated to learn and are well-behaved (Tables 5.1–5.8);

[1] In some instances, the survey is administered on paper.

- The level of **problems the school experiences** that are related to fourteen student behaviors or conditions (e.g., truancy, violence, bullying, substance use, mental health, and physical health) (Tables 6.1–6.8);
- The nature, communication, and enforcement of rules and policies related to **discipline** (Tables 7.1–7.5); and
- Staff **professional development** needs (Tables 2.12–16, 3.10, and 4.10-4.13).

Learning Supports Module (LSM)

The Learning Supports Module (Tables 8.1–8.24) consists of 23 questions that are answered only by staff who provide services or instruction related to health, prevention, discipline, safety, or counseling. These questions assess a school's programs, policies, supports, and services that address nonacademic barriers to learning and promote healthy youth development. The results can be compared to the level of student need as indicated by staff perceptions of problems (from the first section of the CSCS) and student report (from the CHKS).

Special Education Supports Module (SESM)

The Special Education Supports Module (Tables 9.1–9.25) consists of 24 questions designed to be answered only by staff who have responsibilities for teaching or providing related support services to students with Individualized Education Programs (IEPs). It provides data to better understand issues involving (1) effectively meeting the needs of students with IEPs and (2) recruiting and retaining special education staff. The CDE Division of Special Education is providing special reports to districts that compare CSCS results reported by staff who have special education responsibilities to those reported by other staff.

THE REPORT

If the survey is administered online, all results for the district are provided immediately over the Internet, in question order, as bar charts. Results for each school level (elementary, middle, and high school) must be viewed separately. In this Main Report, results are provided in tables with data from all school levels assessed. The usual school levels are elementary (grades 1–6), middle (grades 7–8), high (grades 9–12), and continuation (ungraded, with 16 years being the earliest age of admittance), as appropriate.[2]

The tables are organized into nine topical sections, as outlined in the Table of Contents, and provide, by grade level, the percentages of staff responding to each response option for each question. Percentages are rounded off to the nearest whole number. Summary tables at the beginning of the report, identified by the letter "S" before the table number, provide key indicators in each area and group the data together for a quick overview. For each key finding in a summary table, a reference is provided to the table where the detailed results can be found.

Supplemental Reports

All school districts that participate in the CSCS receive reports that break down their results by comparing special education staff to general education staff and, if appropriate, comparing migrant education program staff to other staff. By request, the data can also be disaggregated by the race/ethnicity of respondents or by another group comparison (an additional fee applies).

[2] For reporting purposes, K–8 schools are coded as elementary.

AIDS TO UNDERSTANDING AND USING THE DATA

In addition to the *Guidebook for the California School Climate Survey Part II: Survey Content, 2011-12 Edition*, there are several other guides, workshops, and other aids to help schools understand and use survey results. Two are particularly important.

- The *CHKS Guidebook to Data Use and Dissemination* (*http://chks.wested.org/using_results*) describes a step-by-step process for reviewing, analyzing, and disseminating survey results as part of a data-driven decision-making process for program improvement. Although written for use with student data, the guidelines apply equally as well to staff survey data. Free call-in data use workshops are offered as well.
- *The Workbook for Improving School Climate and Closing the Achievement Gap: Using Your California Healthy Kids and California School Climate Survey* (http://cscs.wested.org/about/ctag) provides a practical guide to using the data in the framework of improving academic achievement and well-being among all students and closing the achievement gap. It helps identify key findings and strategies that address the identified needs. A workshop accompanying this workbook is also available. (www.chks.wested.org/using results/publications).

ASSESSING THE DATA

Care must be taken to fully understand the survey; the context within which the data were collected; and the factors that can impact the quality, validity, and generalizability of the results. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the *CHKS Guidebook to Data Use and Dissemination* .

Representativeness

Among the most important factors affecting the quality of survey results is the level of staff participation. The validity and representativeness of the results will be adversely affected if the staff response rate is lower than 60%. One indication of the survey's representativeness is how accurately the characteristics of the sample (see Section 1) reflect the characteristics of the staff as indicated by personnel records. Even if the response rate is low, the results provide an indication of what those staff who did respond felt about the school and their experiences and behavior. Strategies for increasing participation are discussed in the following section.

Changes Between Surveys

Many factors besides real changes in behavior, attitudes, or experiences among staff may account for changes in results from administration to administration. Changes may be due to differences over time in the characteristics or size of the sample of staff who completed the survey, changes in the questions themselves, or differences between time periods in which the survey was administered.

Data Comparisons

Comparing results to other local, county, and state data provides a broader context with which to assess the local situation. This can help you determine whether local changes are unique or may be part of a broader trend. Ultimately, however, the most fundamental concern should be what the survey results say about your schools and what improvements need to be made. Results from all schools in the state that conducted the CSCS may be downloaded from the CSCS website: www.cscs.wested.org/reports

IMPROVING PARTICIPATION

The *CSCS Survey Administration Guidebook* provides strategies for improving voluntary staff participation; one of the most important is raising awareness among staff of the value of the survey to the

school and the value of staff perceptions to school improvement efforts. To that end, it is important that staff are informed about the results and any school-improvement efforts that are undertaken in response. As discussed below, it is also important to discuss the results, and what should be done to address the identified needs, with staff. Staff must perceive that their voices are heard and valued.

NEXT STEPS

Receiving this report is a beginning step in the process of using data to improve school climate. The following describes further actions that you can take.

Request School Reports

If the schools in the district vary significantly in demographics, programs, or other characteristics, consider requesting individual reports for each school (a fee applies).

Compare with Other Data Sources

CSCS results will be enriched if analyzed in the context of data from the CHKS and other sources, particularly in the context of identifying consistent patterns or disconnects that need to be further explored. Other data typically collected in effectiveness studies of school climate include numbers and kinds of discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

Discuss with Students and Staff

Discuss the results with both students and staff to explore the meaning of the results in more depth and to obtain their input into how the school might better meet the needs identified. This is especially important because it communicates to staff that you value their input, and it may help improve participation in the next survey. Cal-SCHLS staff can provide information on conducting structured group *Listening to Students* fishbowls designed to explore with students, with staff observers, the meaning of survey results and obtain their input on how to address the needs identified by the survey.

Conduct Additional Analyses

The complete dataset is available electronically for additional analysis (there is a small fee for preparation). The dataset enables analyses of patterns in the results, how they are interrelated, and how they vary by different subgroups of staff and across schools within a district.

Add Questions to Your Next Surveys

Determine what additional information is needed from staff to guide school improvement efforts and add questions to your next CSCS or CHKS. Both surveys were designed so that schools can add additional questions to help them conduct a more individualized and comprehensive assessment.
