PREFACE

This report provides the detailed results for each question from this school/district's 2013–14 *California Healthy Kids Survey* (CHKS), presented in tables organized by topic. This year, the content of the survey was significantly revised to enhance the value of its data for guiding school improvement efforts and developing and monitoring the newly-required Local Control and Accountability Plan (LCAP), particularly in regard to the state priorities of enhancing school climate, pupil engagement, and parent involvement.

To help in understanding and interpreting these results, the *CHKS Guidebook* to survey content discusses the significance of each question.[1] Several other tools to help in data use are also available, as described below. For additional information and resources, visit the survey website: chks.wested.org.

The CHKS, along with its two companion surveys — *California School Climate Survey* (CSCS) for staff and the *California School Parent Survey* (CSPS) is a service of the California Department of Education (CDE). These three surveys form the *California School Climate, Health, and Learning Surveys (Cal-SCHLS)*, the largest, most comprehensive effort in the nation to assess students, staff, and parents at the local level on a regular basis to provide key data on school climate, learning supports and barriers, stakeholder engagement; as well as overall youth development, health, and well-being.

The results of this student survey should be compared to those obtained from school staff and parent surveys. It is important to determine how consistent are student, staff, and parent perceptions and experiences. Appendix 5 of *Workbook for Improving School Climate* provides a crosswalk between student, staff, and parent survey questions to facilitate this comparison.[2]

SURVEY PURPOSE

The California Department of Education (CDE) has funded the CHKS since 1997 to provide data that would assist schools in: (1) fostering positive school climates and engagement in learning; (2) preventing youth health-risk behaviors and other barriers to academic achievement; and (3) promoting positive youth development, resilience, and well-being. A thorough understanding of the scope and nature of youth behaviors, attitudes, and learning conditions is essential to guide school improvement efforts and to also develop effective prevention, health, and youth development programs. These surveys grew out of CDE's commitment to helping schools promote the successful cognitive, social, and emotional development of all students and create more positive, engaging school environments for students, staff, and parents.

SURVEY CONTENT OVERVIEW

The secondary-school CHKS consists of a required general Core Module and a series of optional, supplementary topic-focused modules that districts can elect to administer. Districts may also add their own questions of local interest in a custom module. Table A1.1 indicates the modules administered by the district.

The Core Module consists of a broad range of key questions, identified by an expert advisory committee, that are considered most important for schools to administer to guide improvement of academic, health, and prevention programs and the promotion of student achievement, positive development, and well-

[2] *See californias3.wested.org/resources/schoolclimateworkbook-2ndedition_final.pdf.*

being.[3] The primary focus of the Core Module is assessing student perceptions and experiences related to school climate and engagement, learning supports, and health-related, non-academic learning barriers (e.g., substance use, bullying and violence, and poor physical and mental health). To further support school improvement efforts and the LCAP, a supplementary School Climate Module is also available.

School-Related Core Content

The great majority of all questions on the CHKS Core are school-specific. The survey provides self-reported data on:

- Student grades, truancy, reasons for missing school, learning motivation, and school connectedness, as indicators of engagement;
- The levels of students' three fundamental developmental supports (protective factors) that promote positive academic, social, and emotional outcomes: experiences of caring adult relationships, high expectations, and opportunities for meaningful participation at school;
- Perceived safety and the frequency of, type, and reasons for, harassment and bullying at school; and
- Levels of violence, substance use, and crime-related behavior (e.g., weapons possession) at school.

Supplementary School Climate Module

A supplementary School Climate Module provides additional data on student academic mindset, school academic supports, discipline/order, supports for social-emotional learning, bullying prevention and positive peer relationships, respect for diversity, and the quality of the physical environment. A companion Learning Conditions module can be added to the staff survey to compare their perceptions on the same constructs. Download: chks.wested.org/administer/supplemental1#clim.

Closing the Achievement Gap

Several tables are useful for helping districts identify and address student needs related to closing the state's persistent racial/ethnic achievement gap. On the CHKS, students are asked to indicate their racial/ethnic identity and to report whether they have experienced harassment because of their race/ethnicity. Summary tables provide key findings (e.g., harassment, developmental supports, school connectedness) disaggregated by race/ethnic categories. A supplementary module is available that assesses student attitudes and experiences related to equity, diversity, cultural sensitivity, and respect. Schools can request supplementary reports disaggregating all their CHKS results by the race/ethnicity of students.

SURVEY ADMINISTRATION AND SAMPLING

School staff administered the survey, following detailed instructions provided by CDE that were designed to assure the protection of all student and parental rights to privacy and to maintain confidentiality. Students were surveyed only with the consent of parents or guardians. Each student's participation was voluntary, anonymous, and confidential. Table A1.2 gives the target sample of students and the final number and percent of students who completed the survey (the participation response rate).

[3] *Guidebook to the California Healthy Kids Survey, Part I: Administration (chks.wested.org/training_support) provides detailed information about the content of all of the survey modules. The modules themselves can be downloaded from chks.wested.org/administer/download.*

THE REPORT

The tables in the Main Report, organized by topic, provide the percentages responding to each question response option by grade level. Because it is just as important to identify the positive behaviors of youth as it is to identify the risks they face, the tables reporting risk-behavior data include the percentages of youth who responded negatively (did not engage in the behavior).

UNDERSTANDING AND USING THE DATA

Several guides, workshops, and other aids are available to help you understand and use the survey results. These are described and made available on the survey website. Three are particularly important:

- To help in understanding and interpreting these results, *Guidebook to the California Healthy Kids Survey, Part II: Survey Content* (chks.wested.org/training_support) provides a detailed explanation of each question and its significance (why it was asked) and the potential implications of the results for programs.
- The *Guidebook to the California Healthy Kids Survey, Part III: Data Use and Dissemination* (chks.wested.org/training_support) provides a step-by-step process for reviewing, analyzing, and disseminating survey results as part of a data-driven decision-making process for program improvement. Free call-in data use workshops are offered as well.
- The *Workbook for Improving School Climate and Closing the Achievement Gap* provides a practical guide to using the data in the framework of improving academic achievement and well-being among all students and closing the achievement gap. It provides examples of how to use the data to improve practice and policy.[4]

Care must be particularly taken to understand the factors that can impact the quality, validity, and generalizability of the results, such as changes that occur in survey content, administration, and/or sample characteristics between administrations. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the *CHKS Data Use and Dissemination Guidebook*.

Sample Characteristics

Among the most important factors affecting the quality of survey results is the level and type of student participation. The validity and representativeness of the results will be adversely affected if the student response rate is lower than 60%. One indication of the survey's representativeness is how accurately the sample reflects the gender and ethnic composition of the district's student enrollment. Even if the response rate is low, the results provide an indication of what those students who did respond felt about the school and their experiences and behavior.

Changes Between Surveys

Many factors besides real changes in behavior, attitudes, or experiences among students may account for changes in results from administration to administration. Changes may be due to differences over time in the characteristics or size of the sample of students who completed the survey, changes in the questions themselves, or differences between time periods in which the survey was administered (e.g., some risk behaviors tend to increase as students age, or may increase after holidays or social events).

[4] *The Guidebooks may be downloaded from chks.wested.org/training_support, and the Workbook from chks.wested.org/about/ctag.*

NEXT STEPS

Receiving this report is just a beginning step in a data-driven decision-making process. The following actions can be taken to analyze and use the results to support school and program improvement efforts.

Compare with Other Data Sources

CHKS results will be enriched if analyzed in the context of data from the CSCS and other sources, particularly in the context of identifying consistent patterns. Other data typically collected in effectiveness studies of school climate include numbers and kinds of discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

Discuss with Students, Staff, and Parents

Discuss the results with both students and staff to explore the meaning of the results in more depth and to obtain their input into how the school might better meet the needs identified. This is especially important because it communicates to students that you value their input into how to improve the school and gives them an opportunity for meaningful participation. This helps improve student perceptions of the developmental supports and opportunities that the school offers and enhances school connectedness. Cal-SCHLS staff can provide information on conducting structured group *Listening to Students* fishbowls designed to explore with students, as staff observe, the meaning of survey results and obtain their input on how to address the needs identified by the survey.

Equally important is communicating the results and your plans for making improvements to parents. This fosters parent involvement and collaboration in addressing the identified needs, and also support for the survey, important for improving student participation rates. The importance and value of this has been made even greater by the parent involvement requirements of the Local Control and Accountability Plan.
